Project 18-2252

What's Happening in the Cawthra / Bloor Construction Compound?

What's happening now:

- The crane in the compound will be used to lift light loads. This work will not make much noise.
- A small pump will keep the shaft drained. The water will be discharged to the sewer within the compound.

What's happening next:

- In the next 4 – 6 weeks, we will remove the existing wood hoarding and replace it with a higher concrete noise wall to protect you from construction noise. This work will take about 3 weeks.

And after that:

- We will let you know the next steps closer to the time.

If you have any questions or concerns:

- Please let me know. I'll do my best to help.
